

LED FLEXIBLE TRANSPARENT SCREEN

LED -Transparent -Flexible- Display Pioneer

LED晶膜屏

LED CRYSTAL FILM SCREEN

What is LED crystal film screen?

LED flexible crystal film display screen is a combination of research and development and manufacturing of core materials for LED flexible transparent film screens, circuit design and production, SMT, injection, assembly. Unlike traditional LED display screens, crystal film screens have the characteristics of lightweight, thin, transparent, easy to install, flexible, bendable, and customizable.

Up to 94% light transmittance

Crystal film screen with its ultra-high permeability, to ensure the original lighting effect, provide high-definition picture quality at the same time, zero effect to the light penetration, keep the room bright and natural.

Arbitrary folding and bending

The flexibility of the crystal film screen makes it easy to realize any folding, and can be perfectly adapted to a variety of curved glass surface. The minimum bending diameter is 6cm, and it can fit perfectly whether it is round, curved or irregular shape, adding unlimited creativity to the space.

Ultra-thin design

The use of ultra-thin design not only makes the crystal film screen more visually bright, but also greatly reduces the space occupied, easy to install and use. In addition, the ultra-thin design also means that less material is used, thus reducing production costs.

Seamless splicing

Adopting frameless design, perfect seamless splicing, so that the picture will be smooth without marks, can be splicing any size, splicing the larger the display the visual effect is better.

LED crystal film screen application scenarios

Driven by the continuous innovation and development of science and technology, LED crystal film screen, as a new generation of LED transparent display technology, is gradually changing our cognition and application of the display. This new type of LED transparent display with its unique characteristics and unlimited potential, is now becoming a popular choice in the business, culture and entertainment.

Window advertising solutions

Clothing design, electronic products, and cosmetics all rely on their high-quality visuals and excellent color reproduction ability to fully showcase the details and texture of products.

Business Center Solutions

Real time release of mall promotions, special offers, new product recommendations, etc. These pieces of information not only guide consumers for shopping, but also bring more tourists and sales of the mall.

Airport Lobby Solution

Real time update of flight information. By analyzing the shopping habits and hobbies of passengers, targeted advertising can increase the conversion rate and effectiveness of advertising.

Museum Solutions

Virtual reconstruction of cultural relics through high-tech means, showcasing the details of cultural relics from multiple perspectives. High definition and realism, providing better visual effects.

Automotive 4S Store Solutions

Showcasing the appearance, interior, and functional characteristics of a car, through holographic projection technology, consumers can have a virtual experience of the car before purchasing, enhancing their understanding of the product.

Stage solutions

Display virtual scenes and combine them with actual stages to create a performance space that transcends physical limitations, providing audiences with a vivid visual experience.

Product model number	P4-8	P6	P10
Pixel Pitch(mm)	8*4	6*6	10*10
Module resolution(px)	30×300	40×200	24×120
Resolution(pixels/m ²)	31250	27777	10000
Screen visual transmittance	87%	90%	94%
Brightness(cd/m ²)	2000~4000 Adjustable		
Module size(width×height×thickness mm)	1200*240*2		
Module weight(Kg/module)	1.1		
Peak power(W/m ²)	600		
Average power(W/m ²)	200		
Operating ambient temperature/humidity	-20°C ~ 60°C/10% ~ 90%RH, no condensation		
Pixel composition	1R1G1B		
Horizontal view/vertical view	120°/110°		
Evenness	≥98%		
Maximum contrast	4000:1		
Protection grade	IP43		
Refresh rate(Hz)	≥3840		
LED Life time	≥10Ten thousand hours		

*Customizable brightness and size according to customer needs

LED晶芯屏

LED CHIP SCREEN

What is LED chip screen?

LED chip screen is a product that breaks away from conventional LED transparent screens. The LED bead naked crystal planting technology is used, and the lamp board uses transparent crystal film, with a transparent mesh circuit etched on the surface. The components are fixed on a high transparency flexible film, and after the surface is pasted with the components, the vacuum sealing process is used to integrate the display module into a high transparency optical lens type substrate that can emit light. Unlike traditional LED displays, chip screens have the characteristics of high energy efficiency, lightness, thinness, high transparency, simple installation, softness, flexibility, and adjustable.

High permeability

The transparency of LED chip screens reaches 98%, with a light transmittance of 80%, which does not affect visibility and daylighting.

Slim Design

Adhesive lamination process, thickness $\leq 1\text{mm}$,
Can be better applied to various irregular scenes

low power consumption

The use of solid-state technology and external driver design results in extremely low power consumption, with a power output of only 120W-140W per square meter. This efficient design achieves about 80% energy-saving effect, greatly reducing energy consumption and operating costs.

Borderless design

Adopting a frameless design, the LED chip screen achieves perfect seamless splicing, eliminating the limitations of conventional panel borders and presenting a smoother and more natural visual effect, achieving seamless visual integration

Module series

Up to ten different pixel pitch specifications meet the display needs of different scenes, achieving the best display effect at the lowest cost.

Advertising Machine Series

Mainly used in public service halls of shopping malls, shops, beverage shops, cinemas, and railway stations. Due to its high transparency, stylish appearance, and convenient use, the product is highly sought after and used by customers.

Working environment	Temperature: -30°C~60°C Humidity: 10~65%			

Easy to install

Without the need for steel structure, just lightly stick the thin screen and connect the power & signal source; Self developed film coating process (the screen body has inherent viscosity and can be directly attached to the glass surface, with strong adsorbability. Its inherent characteristics will also increase in viscosity over time)

*Before installation, the glass should be wiped clean, professional tools should be used, and dust gloves should be worn before installation.

Control Method

Widely used in creative displays, comprehensive shopping malls, retail storefronts, exhibition displays, and other scenarios.
